4. Harvest() - collects the crops once they are ripe
5. Sell() - exchanges harvested crops for money

Algorithms

- 1) Plant()
 - a) Check the season and soil condition
 - b) Choose the crop to plant
 - c) Prepare the soil (till, remove weeds)
 - d) Dig holes or rows

- e) Place seeds/seedlings
 - f) Cover with soil
 - g) Increase CropsPlanted count

2) Water()

- a) Check soil moisture
- b) Get water source if dry
- c) Pour water evenly on crops
- d) Avoid overwatering
- e) Repeat on schedule

3) Fertilize()

- a) Check crop growth stage
- b) Choose fertilizer type
- c) Measure correct amount
- d) Apply around crops
- e) Water lightly after

4) Harvest()

- a) Check if crops are ripe
- b) Inspect for pests or damage
- c) Gather tools
- d) Cut or pick crops
- e) Sort by quality
- f) Store properly
- g) Decrease CropsPlanted count

5) Sell()

- a) Check market price
- b) Sort crops by grade
- c) Pack for transport
- d) Bring to market or buyer
- e) Negotiate price
- f) Complete sale
- g) Increase Income
